Aventyn[®] Partners with NagraID for Secure Identification

CLIP[®]CareLock to Support NagraID Display Cards for Unique Physician and Patient Authentication

Carlsbad, California – March 23, 2010 – [Aventyn Inc.](#), an innovative provider of secure connected clinical information processing solutions, today announced support for leading secure identification solutions by **NagraID Security** with the company's CLIP[®]Care hospital and physician office solutions for unique patient, clinician identification and authentication on mobile platforms. This announcement was made at [CTIA](#) – Qualcomm Partners in Wireless Health Pavilion in Las Vegas, NV.

NagraID card solutions with One Time Password, display cards in the NIDS 100, 200 and 300 series allow Aventyn's health IT solutions with integrated RFID capability meet the needs of healthcare providers, patients and payers for secure identification and authentication preventing fraud, identity theft and unauthorized access to health information systems. Integrated with **CLIP[®]CareLock** for unique patient registration, identification and authentication ensures the right patient gets the right care, at the right time, anytime and anywhere for improved patient safety. Clinicians are ensured secure network access to health information systems using a combination of OTP physical access cards, encrypted pin and key exchange with seamless one-click security credential based on individual profiles, mobile devices and terminals.

Joint Benefits and Capabilities:

- Built on the company's unique, **healthKrypt[™]** CPU based security technology
- Dynamic Encryption For Each User, Device, Services Combination
- Local and Remote Management of Access Privilege to Devices and Data
- Protect Diverse Devices and Terminals Against Tampering and Data Theft
- Meets Need for HITECH-HIPAA PHI Security and Trusted Medical Banking
- Easy integration with EHR systems and applications for one-click encrypted access

Uniquely encrypting user IDs, devices and data, health record information is protected with one-click authentication and robust key management with NagraID secure card access. User profile-based accesses to provider, payer, and consumer portals provide health IT CIO's and administrators capabilities to implement secure access policies and procedures, offer new value-add services, extend and improve secure trusted partner transactions preventing theft and fraud.
